Our First Experience of Growing, Harvesting, Preparing and Sharing

Our first harvest of salad greens was greeted with great excitement, with all the students eagerly sampling the produce they had nurtured.

Planting and caring for vegetables enables students to experience the joys of taking care of produce and the responsibility of making sure that they get the water and nutrients needed.

Areas around the school have been identified as potential herb, fruit and vegetable gardens and we look forward to watching these spaces flourish.

Returning from Christmas, February 2010, brought great excitement for the students as they were able to use the tomatoes and herbs from their garden to make and share spaghetti bolognais. The sauce and smiles spread on the student's faces was a sign of an enjoyable experience.
Worm Farming

The SAKGP has inspired us to undertake an environmental project of Worm Farming. We believe that this will have a positive effect on our school community by reducing organic waste and providing a rich fertilizer for our kitchen garden. Six worm farm bins have been set up around the school and the worms are fed our crunch’n’sip (fruit and vegetable) scraps.

Each week a team of environmental officers conduct a maintenance check and collect the rich worm juice. We are very enthusiastic about our new project and can’t wait to see the environmental benefits grow!
